

```
package Program02;

import java.util.GregorianCalendar;

public class Main {
    public static void main(String[] args) {
        GregorianCalendar calendar = new GregorianCalendar();
        System.out.println("Current year, month, date, and day of week");
        System.out.println("Year is "+calendar.get(GregorianCalendar.YEAR));
        System.out.println("Month is "+calendar.get(GregorianCalendar.MONTH));
        System.out.println("Date is "+calendar.get(GregorianCalendar.DATE));
        System.out.println("Day of week is
"+calendar.get(GregorianCalendar.DAY_OF_WEEK));
        calendar.add(GregorianCalendar.DATE, 1);
        System.out.println("-----");
        System.out.println("After specified the elapsed time of one day after
current day");
        System.out.println("Year is "+calendar.get(GregorianCalendar.YEAR));
        System.out.println("Month is "+calendar.get(GregorianCalendar.MONTH));
        System.out.println("Date is "+calendar.get(GregorianCalendar.DATE));
        System.out.println("Day of week is
"+calendar.get(GregorianCalendar.DAY_OF_WEEK));
        System.out.println(calendar.getTime());
    }
}
```
