```java
package Program01;
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);
        Stock Oracle = new Stock("ORCL", "Oracle Coporation");
        System.out.println("Symbol : " + Oracle.symbol);
        System.out.println("Name : " + Oracle.name);
        System.out.print("Previous Closing Price : ");
        Oracle.previousClosingPrice = input.nextDouble();
        System.out.print("Current Price : ");
        Oracle.currentPrice = input.nextDouble();
        System.out.print("Price Change : " + Oracle.getChangePercent() + "
%");

        input.close();
    }
}
```

Main class

```java
package Program01;
public class Stock {
    public String symbol;
    public String name;
    public double previousClosingPrice;
    public double currentPrice;

    public Stock(String symbol , String name){
        this.symbol=symbol;
        this.name=name;
    }

    public double getChangePercent(){
        double change = ((this.currentPrice-
this.previousClosingPrice)/(this.previousClosingPrice))*100;
        return change;
    }
}
```
